William Stafford

Blockchain Developer

Ambitious, Skilled, and Ready for
Advancement

ABOUT

Over the past decade, I've been deeply involved in software development, starting from web development and advancing to senior positions while also mastering DevOps along the way.

In 2022, I decided to jump into the exciting world of blockchain. Since then, I've been exploring Ethereum, Solana, and Solidity, getting a good grip on blockchain technologies and smart contracts.

Now, I'm eager to bring my experience and knowledge to cutting-edge projects in decentralized platforms. I'm passionate about innovation and love collaborating with teams to create groundbreaking solutions in decentralized finance and blockchain ecosystems.

EXPERIENCE

2022 — 2024

Blockchain Developer · Mogle ↗

Started my journey in the blockchain industry at a DApp development startup. Quickly grasped Solidity and smart contracts while making significant contributions to projects. Collaborated in a small, ambitious team of three, driven by clear goals and determination.

Smart Contracts · Solidity · Ethereum · Hardhat · Uniswap

2020 — 2022

Senior Software Engineer · BuiltMighty ↗

As a Senior Software Engineer, I initiated project roadmaps, built boilerplate code, conducted code reviews, and managed DevOps processes. Collaborating with cross-functional teams, I delivered innovative solutions. Mentoring junior developers fostered growth. My focus on excellence drove project success and contributed to shaping technological landscapes.

Google Cloud · CircleCI · Kubernetes · Docker · WordPress · Node.js · SEO

2014 — 2020

Web / Mobile Developer · IDC/Games ↗

Over six years at IDC/Games, I advanced from junior web developer to a proficient contributor, specializing in C#, Python, and JavaScript for web and mobile development. I led the development of critical components, including web services, admin dashboards, and landing portals. Collaborating closely with the CTO, I helped implement progressive development patterns and provided valuable insights for decision-making. Together, we shaped the company's technological direction, enhancing workflows and adopting innovative strategies to drive efficiency.

Python   C#   JavaScript   AWS   React Native

PROJECTS

IDC/Games ↗

IDC Games is a multi-language digital PC game distribution platform that integrates user registration, in-game payments, esports, and a loyalty program, for every published game in the platform.

⤓ 200k+ installs

Trueview Money ↗

TrueView was born out of an intense passion for helping people spend smarter and save money.

★ 1000+

React   Express   Spotify API   Heroku

Third Party Verification Resources ↗

Third Party Verification, or TPV, is the process of having an independent third party confirm the identity of the customer, whether he or she has authorization to place or change an order, and whether the customer comprehends the details.
